Product leader with over a decade of experience specialising in enterprise B2B SaaS, with a rare combination of hands-on engineering background and strategic product ownership. Passionate about discovery-led development, AI-powered product innovation, and building the processes that help teams ship work that truly matters to customers.

Experience

Product Lead • Causeway

04/2026 - Current • Remote

Causeway is the UK's leading software provider for the construction, maintenance and infrastructure sector, serving over 3,000 customers across the full built environment lifecycle, from design and estimating through to project delivery and asset management.

I'm working in the strategy to transition Causeway from a portfolio of point solutions to an AI-first platform, harnessing the company's deep industry expertise and data to deliver higher-quality insights through a simpler, faster user experience.

Product Lead • Bubble

04/2025 - 04/2026 • Remote

Bubble is a leading Project and Portfolio Management (PPM) SaaS platform with 25 years of industry experience, serving a global client base across multiple verticals.

Joined as the first dedicated product hire to drive a discovery-led transformation of the platform strategy, establishing the product principles and roadmap process from the ground up.

Responsibilities

- Led the end-to-end delivery of a major platform overhaul across the full customer base, migrating to a modern technology stack and redesigned user experience incorporating contemporary project management methodologies. The staged rollout reduced onboarding time by 20% and customer support demand by 70%, and was received to widespread positive customer feedback.
- Introduced a transparent, impact-led prioritisation framework that replaced siloed, waterfall-style decision-making with cross-business visibility, accelerating time-to-market by reducing handoff bottlenecks across product, engineering and stakeholder teams.
- Lead product discovery and strategic planning initiatives, leveraging direct customer research and stakeholder engagement to align platform capabilities with enterprise market demands and build an evidence-based roadmap that reflects real customer needs.
- Establish and maintain product principles centred on flexibility, configurability and user-centric design, creating a shared foundation for scalable product decision-making.
- Identified and delivered a suite of enterprise tooling integrations addressing the workflows of 80% of the customer base, meaningfully expanding the platform's value proposition for existing and prospective customers.

Senior Product Manager • Adarga

11/2019 - 03/2025 • Remote (London/Bristol)

Adarga is an Enterprise Knowledge Platform leveraging cutting edge AI and combining it with a knowledge graph to deliver deep and critical insights for intelligence analysts and information professionals.

Responsibilities

- Report directly to the VP of Product as a key stakeholder in the decisions, strategic direction and alignment of the product portfolio.
- Own the roadmap for core platform features, ensuring alignment with business goals and customer needs.

- Collaborate cross-functionally with engineering, design, and customer success teams to drive product delivery and adoption.
- Fulfil the Product Owner role in agile development teams.
- Capture diverse requirements from external stakeholders and product advocates to influence roadmap decisions.
- Advocate for product discovery approaches, leveraging experimentation, user research and data insights to prioritise features and improvements.
- Engage in user research to promote data-driven and evidence based decision making.

Strategic Initiatives

- Launched a mobile app to increase company exposure and drive interest in the business which achieved a 91% conversion rate from downloads to account creation, 75% WAU, and over 5 minutes average engagement per session.
- Refactored the data ingestion pipeline using LLMs from OpenAI & Anthropic leading to increased speed and quality of entity extraction whilst reducing costs by ~70%.

Achievements

- Mobile app featured on The Verge.
- Mobile app reaching #57 in the Apple App Store's News category.
- Contributed to Adarga securing the 14th position in Deloitte's UK Tech Fast 50 2023

Head of Product • Titania

10/2018 - 11/2019 • Worcester, UK

Titania is a world-leader in security analysis for network devices, helping CISOs and Network Managers build configuration confidence in their security posture.

- Led transformation towards a product-led growth (PLG) model, promoting customer self-service through objective based onboarding and product-first strategies. This change overachieved in it's target to increase trial conversion by 40%.
- Spearheaded a product and market shift to a full SaaS offering of the product portfolio, reducing churn by over 70% and opening the door to more commercial markets lead by enterprise-ready functionality like SSO.
- Developed impactful user outcome based strategies through direct end-user collaboration, addressing pain points and aligning roadmaps with precise needs.

Head of Engineering • Titania

08/2017 - 10/2018 • Worcester, UK

- Directly managed 5+ senior engineers and 2+ engineering managers promoting a coaching style of mentorship maintaining a high level of employee retention and satisfaction.
- Optimised productivity across teams of 20+ developers through strategic structural changes and resource allocation.
- Enhanced coding standards and product quality, contributing to award-winning results.
- Fostered innovation and collaboration across teams, aligning technical advancements with business objectives.
- Lead change management across a large technical shift from C++ to more modern languages like JavaScript, Python and Rust.

Team Lead / Senior Software Engineer / Agile Coach • Titania

2014 - 08/2017 • Worcester, UK

- Drove product development lifecycles with a focus on measurable enhancements informed by extensive feedback.
- Implemented Agile processes, advanced resource allocation, and led integration of high impact roadmap items.
- Overhauled and maintained the tool set, including Jira, Confluence & Bitbucket.

Software Engineer • Titania

2010 - 2014 • Worcester, UK

- Rebuilt the company website using Drupal CMS increasing site engagement by 300%.
- Maintained and developed software tools for security analysts using C++, Qt, XML & CMake on all platforms.

- Developed an in-house License Management service with React & Typescript.
-
